DELTA Series
Cost-Effective Solutions for Diesel-Driven Hydrostatic Machinery

Guardian Couplings
Altra Industrial Motion
ABOUT GUARDIAN COUPLINGS

For more than 70 years, Guardian has been designing and manufacturing world-class couplings and other power transmission components. Utilizing advanced manufacturing technologies and processes, Guardian provides highly-reliable coupling and component solutions to meet the most challenging industrial application requirements.

Guardian provides a wide range of standard and custom products including flywheel couplings, hydraulic pump mounts, bearing supported stub shafts, flexible shaft-to-shaft couplings, motion control couplings as well as compression pipe couplings.

Durable Guardian products are utilized in key industries including mobile hydraulics, farm & ag, tree care, concrete, food & beverage, material handling, automation, power generation, and oil & gas on applications such as skid steers, aerial lifts, harvesters, wood chippers, concrete pumps, dewatering pumps, baggage handlers, conveyors, robotics, compressors, and generator sets.

ALTRA COUPLINGS

Altra Couplings offers the largest selection of industrial couplings available from a single source...worldwide. For over 150 years, TB Wood’s, Ameridrives, Bibby Turboflex, Lamiflex, Guardian and Huco, the industry-leading brands of Altra Couplings have been providing innovative coupling solutions to meet the requirements for a broad variety of drivetrain applications spanning many industries including energy, metals, mining, oil & gas, and food processing. Highly-engineered Altra coupling products represent the latest in coupling technology, featuring superior design and exceptional quality to ensure long-lasting performance in all types of environments.
APPLICATIONS

Guardian Industries has introduced the DELTA Series flexible coupling line for use on diesel-driven hydrostatic machinery and construction equipment. The cost effective DELTA single-piece design incorporates a splined and hardened steel hub that is pre-assembled into the glass-fiber reinforced flange. The DELTA coupling attaches to the engine flywheel, taking advantage of elastomeric grommets that provide a steady dampening effect to normal engine vibrations. Although the coupling incorporates rubber bushings for dampening, it is relatively stiff which allows equipment with low inertia to operate below the critical speed range.

This coupling is suited for accurately aligned drives that minimize misalignments. The DELTA Series is able to accommodate small angular, parallel, and axial misalignments that are typical to piloted flange connections. The DELTA series couplings can achieve torque capacities of up to 6,130 IN-LBS nominally. These high performance couplings are designed for demanding applications on the latest tier engines.

FEATURES & ADVANTAGES

• **Accepts Straight & Splined Shafts**
  The DELTA series steel hub can be manufactured with a straight bore and keyway with set screw retention for the straight pump shaft demands. A spline shaft connection is also acceptable and incorporates a “plugin” design.

• **Single Piece Design**
  The DELTA’s single piece design eliminates extra fasteners and reduces installation costs for blind splined-shaft set-ups. (Straight shaft connections consist of a two piece design).

• **Environment**
  This lightweight coupling is oil resistant and will provide a long service life in temperatures of -40 to 212 degrees Fahrenheit.

• **Reduced Spline Fretting**
  Elastomeric grommets absorb shock loading and reduce transmitted vibration – two major factors that contribute to pump spline fretting.

• **Minimum Maintenance Required**
  The splined and hardened alloy steel hub is greased at assembly with lithium based grease that enables extended service intervals in service conditions up to 212 degrees Fahrenheit.

• **Economical Solution**
  The DELTA series by Guardian is an affordable way to provide higher torque ratings from our traditional designs, while benefiting from its dampening capabilities.

Limited configurations are currently available. Guardian is currently expanding the DELTA Series to service our customer’s requests. Please give us a call today to discuss your application.

* The DELTA Series is able to accommodate small angular, parallel, and axial misalignments that are typical to piloted flange connections only. The Delta Series is not recommended for applications that have excessive angular misalignment.

**The torque values listed are for ambient temperatures. Torque capacities may be reduced at lower and higher temperatures within the -40° F to 212° F temperature range listed. Please review temperature service factors.
